

Level Controls for your next miracle when sanitary CIP processing is required.

Magnetrol's all-new sanitary controls offer an arsenal of advancements specifically engineered to make level measurement, control and maintenance of your sanitary applications far easier.

Our sanitary radar transmitter and ultrasonic switch can be easily cleaned in place or dismantled without difficulty for manual sanitation. 100% electronic and without moving parts, each is ruggedly made to withstand the rigors of modern cleaning and sanitizing.

Probes and housings are designed without crevices or incorrect radii where bacteria can harbor. The contact surfaces are made from microbial-resistant materials manufactured ultra-smooth and finished to a 15 R_a EP surface.

Choose from an Eclipse® Guided Wave Radar transmitter or an Echotel® single-point ultrasonic level switch. Each is a leader in its respective measurement technology and both are ideal for use in media, buffer and CIP applications. These compact controls are accurate, rugged, reliable and easy to commission and operate.
